Shafts spray

Main Hole Spray

OUR PEST SERVICES

Bed Bugs Pest Control

PREVENTION METHODS FOR BED BUGS CONTROL:

Bed bugs are a cosmopolitan pest attacking all where hygiene does not play a role. Bed bugs are hitch hiker and are very common in public transport, hospitals, theaters, hotels, restaurants, hostels etc. They move from place to place along with peoples clothing and baggage. Since they are mostly found in beds they are named as Bed Bugs. So whenever you come from above mentioned areas check all your clothes and luggage thoroughly. The pesticide available in market is not that effective to get rid in one attempt. At least two to three sprays are required. Proper sanitation is the remedy. Spray at core areas of mattress and pillows is done. Gaps of bed is sprayed.

OUR PESTSERVICES

Termite Pest Control

TERMITE CONTROLTREATMENT:

Protective treatment for these areas is provided as follows: Holes of diameter 12 mm (1/2" approx.) are drilled slanting towards the core of woodwork at a distance of 500 mm (20").

Insecticide is then poured into these holes. Special oil based chemical is sprayed on all vulnerable unpainted woodwork to create a chemical barrier.

Checkout Visits: After the initial major termite treatment, our operator will visit your premises for a checkup once in every quarter, after prior intimation by call. Necessary treatment will be carried out in case of any re-infestation. You can call us whenever there is a reappearance of termites during the contract period.

OUR PEST SERVICES

Rodent Pest Control

ALL TYPE RODENT PEST CONTROL METHOD

The most destructive pest is Rodents. Cutting wires, bags, woods, cartons, etc causes massive losses. Spread disease too. All human medicines are tested first on them. Smart pest category.

RODENT MANAGEMENT

2. Sanitation (Do not provide Shelter / do not provide food)
3. Trapping – Glue boards / Snap traps / Wire cage
4. Baiting - Use of Anti-Coagulant Bromadiolone Wax cakes
5. Rodent Lay Out Plan
6. Audit of rodent catch and assured of preventive measures
7. Repellent spray
8. Orbit acts smarter than Rodent

OUR PEST SERVICES

Mosquito Pest Control

Mosquito control is the task of managing the population of mosquitoes to reduce their damage to human health, economies, and enjoyment of mosquito-ridden areas.

Mosquito control is a vital public-health practice because mosquitoes spread many diseases such as malaria, dengue and chikungunya. Present Scenario of Mosquito Related Diseases. About 3000 species of mosquitoes have been described on a world-wide basis.

Mosquitoes belong to a group of insects that requires blood to develop fertile eggs.

Males do not lay eggs, thus, male mosquitoes do not bite. The females are the egg producers and "host-seek" for a blood meal.

Wood Borer Pest Control

Wood borer treatment is specialized treatment service, it is require Chemical base service with combination of fumigant and contact disinfectant chemical for wood preservation without damaging its texture and polish quality. This require the inject disinfectant in to the exit hole with the injection and general

spray on wood infested surface of furniture for effective treatment result against wood borer. Best way to wood borer control is through the preventive measure is oil base disinfectant spray treatment given to plywood before applying varnish, paint, lamination ply and any polish This only given

recommendation when the ply wood sheet board selection

OUR PEST SERVICES

Fly Pest Control

The common housefly is a perfect host for many types of bacteria... proven carriers of such germs as gangrene, Typhoid, leprosy, tuberculosis, amoebic dysentery. House flies can be a real nuisance when they are flying around. But they can also transmit diseases, so it is important to get rid of them. House fly control is not always as easy as it sounds. They prefer corners and edges or thin objects to rest on. Indoors, they rest on floors, walls and ceilings during the day.

Outdoors, they will rest on plants, the ground, fence wires, garbage cans, etc. Night resting places are usually near sources of food and 5 to 15 feet off the ground. Care India Pest Control provides an integrated Pest Control service

FLY MANAGEMENT

- Fix the area
- Find the root cause
- Spray the affected area
- Garbage area and store area spray
- Baiting by granules
- Dustbins be monitored
- Proper disposal plan
- Drains spray

OUR PEST SERVICES

Ticks Pest Control

Ticks are obligate blood-sucking ectoparasites (external parasites) that require an animal host to survive and reproduce. People react differently to tick bites. Ticks are mostly spread in homes from pigeons and pets like dog, cats. Typical tick bites normally trigger skin irritation, which is itchy. Many times people are confused between the bed bugs and ticks bites. Creative Pest Control provides ticks and flea solution. The mode of treatment is identical like bed bugs. If the pet is infected by ticks, the same day the pet needs to be treated.
